DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I (Species II) (Claims 1-11) in the reply filed on 5/16/05 is acknowledged.
2. Claims 12-15 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 5/16/05.

Drawings

3. Figures 1-2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2817

5. Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Applicant's admitted prior art Fig. 2 (AAPA).

AAPA teaches a programmable interpolating gain attenuator including: a termination resistor (R2); a switch Mna and switch Mnb connect between outputs and the termination resistor; first and second ladder circuits; switches connect the taps to the outputs; the switches can be arbitrarily designated as first, second, and third switches and the first switch can be "on" switches (e.g. M2b and M3B), the second switches can be "off" switches (e.g. M1b and M6b), and the third switch can be "on" switches (e.g. M4b and M5b) in the same manner as the claims read on the elected Fig. 3B (Claims 1, 2, 3, 4, 6, 7, 8, 9); a plurality of resistors (e.g. multiple R1s and R2) are between the taps of the two ladders (Claim 5); non-consecutive switches (e.g. M2B and M4B) are turned on (Claims 10-11). Also, note that the order of the switching on or off of the switches is not patentable in an apparatus claim since only the final product structure is patentable in an apparatus claim.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hasegawa teaches a variable gain amplifier circuit.

Groeneweg teaches resistor ladder networks.
